

Fast Forward Video NDT 200

Ideal for a wide variety of applications, the NDT 200 is engineered for high-quality video recording in remote locations. The DVR was designed to meet the unique needs of freelance producers, outside broadcasters, and video assist operators.

Intended to function as a drop-in replacement for tape-based recording devices such as the Sony GVD200™, the NDT 200 will fit effortlessly into the position that your Video Walkman once occupied. With the NDT 200, video recordings are instantly accessible and downloadable, with discrete access to every single frame. Saving material is as easy as swapping the sata 2.5" hard disk.

Power Requirements 7 – 40 VDC. 5W

The NDT 200 combines an intuitive touch pad and soft-button user interface with large push-button controls that make operations instinctive even for new users. All functions can be controlled from the unit or an external PC or VTR controller. Video clips can be recorded in QuickTime™ for playback on PC or Mac or as FFV secure video files. Users can then download the recorded video clips to PC or Mac via the on-board USB 2.0 miniature port or by removing the sata 2.5" hard drive and inserting it into a suitably equipped PC or Mac.
